

GWF Energy, LLC therefore requests that the Tracy Peaker Project be processed under the expedited four-month licensing process envisioned under section 25552 of the Public Resources Code (PRC). Because of the 10-year length of its contract as a simple cycle peaker with the Department of Water Resources, the project is being financed on these assumptions, and GWF Energy, LLC requests that the Commission utilize its discretion to suspend the three-year license restriction contained in section 25552. Alternatively, should the legislature eliminate this limitation, GWF Energy, LLC requests that its application be processed under such legislation.

GWF Energy, LLC looks forward to working with the Commission staff, our neighbors, and the community on the project.

Sincerely,

Doug Wheeler  
Vice President, Project Development  
GWF Energy, LLC
